Q2:

- ❖ Figma
- ❖ Adobe XD
- ❖ Sketch
- ❖ InVision
- ❖ Axure RP

Q3:

Features	Figma	Adobe XD
Platform	Web based	Desktop based
Collaboration	Real time collaboration	Limited collaboration
Ease to use	Very easy	Easy
Plugin	Large library	Moderate
Sharing	Instant link sharing	Requires expert

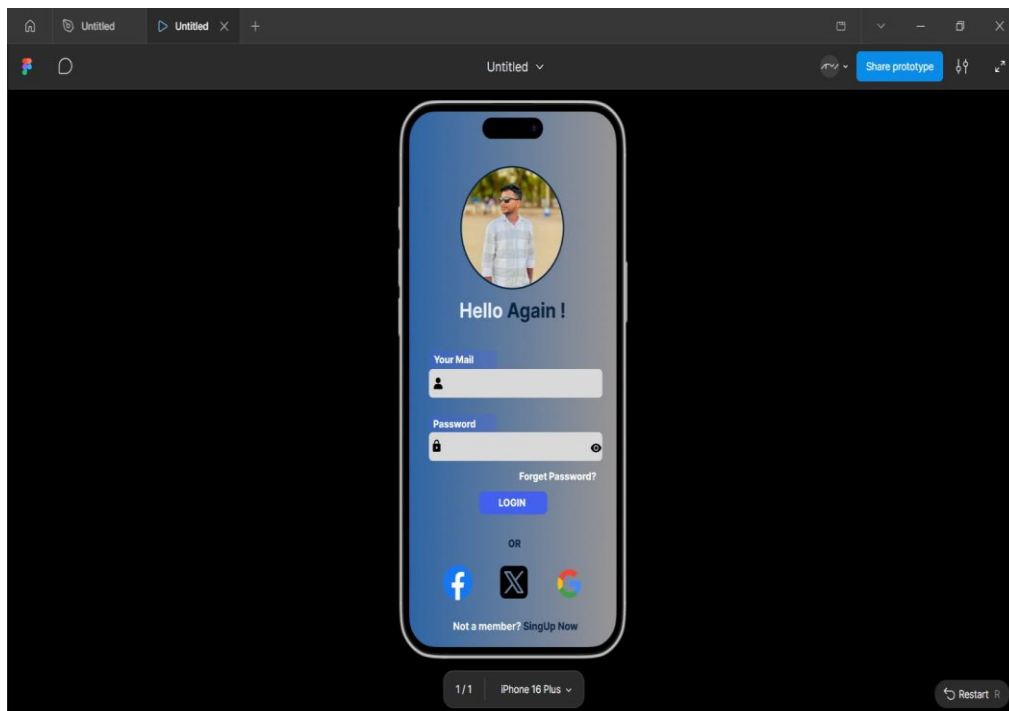

Q4:

1. Real-Time Collaboration: Multiple users can work on the same design simultaneously and see changes in real-time.
2. Cloud-Based: Accessible from any device with internet, no software installation needed.
3. Component System: Allows for reusable design elements and components, making design consistent and efficient.
4. Prototyping Tools: Easily create interactive prototypes with transitions and animations.
5. Design Systems: Support for creating and maintaining design systems for consistency across projects.
6. Version Control: Allows you to view and revert to previous versions of your designs.
7. Plugins: A wide array of plugins available to extend functionality (e.g., accessibility checkers, icons, animations).

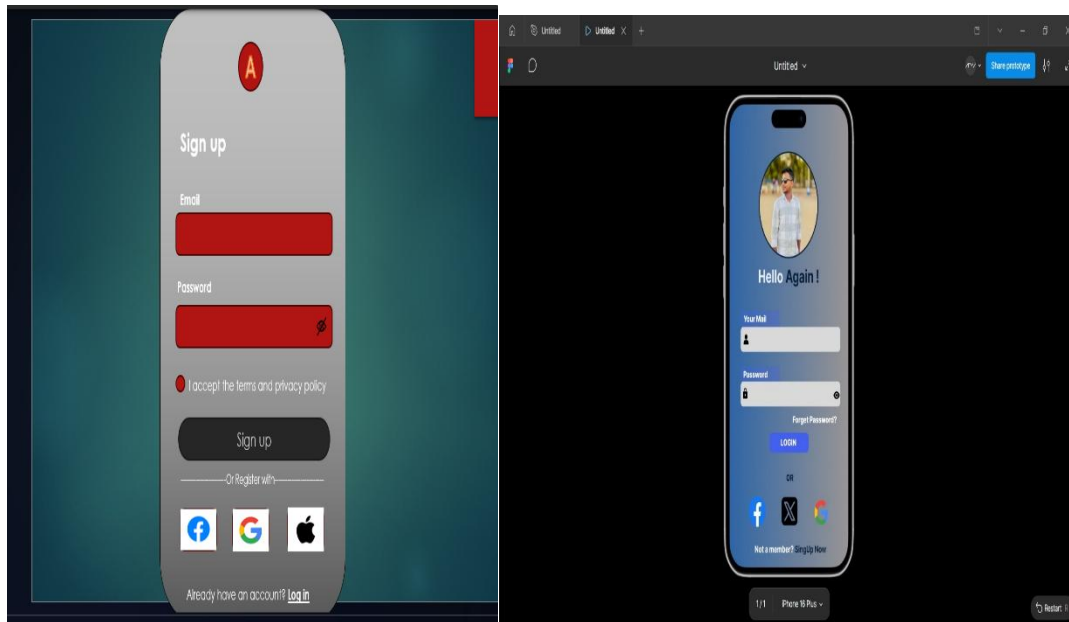

Q5:

- ❖ I signed up for a free account on Figma and explored its interface. The main layout includes a toolbar at the top, a layers panel on the left, and a properties/design panel on the right. The central area is the canvas where designs are created. I also noticed features like components, assets, and real-time collaboration, which make designing and teamwork easier.

Q6:

Q7:

- ❖ Figma is more user-friendly because:
 - ❖ Easy drag-and-drop design
 - ❖ Faster editing and alignment
 - ❖ Built-in components save time
 - ❖ Real-time preview and prototyping
-
- ❖ Example:
 - ❖ In manual/sketch design → hard to edit
 - ❖ In Figma → can quickly resize, align, and style elements
